

Attachment 2

Full Capture Devices

BMP Type	Description	Example Photo
<p>Connector Pipe Screen (CPS)</p> <p>CPS manufactured by StormTek was used in cost calculations</p>	<p>Can be installed in catch basins and clean outs. Bolted in front of the outlet pipe.</p>	
<p>Drainage Insert (grate inlet style)</p> <p>The Grate Inlet Skimmer Box (GISB) manufactured by Bio Clean was used in cost calculations</p>	<p>Typically installed in smaller catch basins with grated inlets. Usually more frequent maintenance than CPS.</p>	
<p>Automatic Retractable Screen (ARS)</p> <p>ARS manufactured by United Stormwater was used in cost calculations</p>	<p>Installed at curb inlets.</p> <p>ARS is <u>not</u> a full capture device. However, when used in conjunction with a CPS, the ARS keeps debris out of the drain and allows it to be picked up by street sweeping, thus reducing the required maintenance frequency for CPS.</p>
